For a certain class of content and hardware, I think deferred shading is still the clear winner for performance and functionality. The class of content is still very relevant today, which is moderate display resolutions (say up to 1920x1080) and complex scenes (hundreds of meshes, dozens of lights).

Deferred Shading Shines. Deferred Lighting? Not So Much

Using light projected into resin, it creates solid objects all in one go, rather than in layers.
