S-log, Logarithmic curves. In this short article I'm going to tell you about the S-log or logarithmic curves. The goal of this tutorial is to learn how they work, what they add to our workflow, and when it is recommended to use them.

Lecture 4 : General Logarithms and Exponentials. For a > 0 and x any real number, we define $x = e^{\ln x}$; ... $\log_{10}(I=S)$ where S =intensity of a standard quake giving an amplitude of 1 micron = 10^{-4} cm on a seismograph 100 km from the epicenter. I = intensity of the earthquake in question measured on a seismograph 100

Lecture 4 : General Logarithms and Exponentials.

Typically, today's students experience teachers incanting: "The log of a product is the sum of the logs." "The log of a quotient is the difference of the logs." The students see the rules with little development of ideas behind them or history of how they were used in conjunction with log

Explaining Logarithms

m) $\log_a a^5$ n) $\log_c ?$ c o) $\log_s s$ p) $\log_e e$ 1 e3 5. The first law of logarithms Suppose $x = a^n$ and $y = a^m$ then the equivalent logarithmic forms are $\log_a x = n$ and $\log_a y = m$ (1) Using the first rule of indices $xy = a^n \times a^m = a^{n+m}$ Now the logarithmic form of the statement $xy = a^{n+m}$ is $\log_a xy = n + m$. But $n = \log_a x$ and $m = \log$
