Probability Density Function in Terms of Moments Sahand Rabbani Problem Statement In this article, we attempt to express the probability density function $f(x)$ of a random variable X in terms of the moments $E[X^n]$, $n = \{0,1,2,\dots\}$, of the distribution. Solution Consider the n th moment of the distribution $f(x)$: $E[X^n] = \int_{-\infty}^{\infty} x^n f(x) dx$.

used in statistics for description of the shape of a probability density function and in classic rigid-body mechanics to measure

the mass distribution of a body. From the mathematical point of view, moments are "projections" of a function onto a polynomial basis (similarly, Fourier transform is a projection onto a basis of harmonic functions).
