## **the master planets pdf**

The inner planets—Mercury, Venus, Earth, and Mars—are all terrestrial. The outer planets—Jupiter, Saturn, Uranus, and Neptune—are gas giants with no solid surface. At the outer edge of the solar system is Pluto, which was once categorized as a planet. Now, however, it is classified as a dwarf planet.

## **The Solar System and Its Planets**

- The planets all revolve in the same direction about the Sun.
- The Sun and the planets, with the exception of Venus and Uranus, rotate on their axis in the same direction. With the exception of Uranus, the tilt between the equator and the orbital plane of the Sun and planets is small.

## **Facts Concerning the Solar System - Stony Brook University**

The Sun, planets (formation and history, composition, atmosphere), moons, asteroids and comets, searching for water, solar system formation, interactions in solar system (Sun and planets, planets and moons and rings), planets around other stars, forming stars, stars young/old and large/small, binary stars, clusters

## **Astronomy**

All planets orbit Sun in same sense, and all but one rotate in that same direction. All orbits but Mercury's are close to same plane. These both suggest that the solar system was originally a rotating disk. 6.3 The Overall Layout of the Solar System

After that Jupiter is the largest thing (with 0.1% of the mass), then Saturn (0.03% of the mass), and Uranus and Neptune together make up only 0.01%. So you and all of the stuff on the Earth and the other 3 small planets, all of the asteroids, etc, make up only 0.001% of the mass of the solar system.

Planet Card Games: Memory Card Game: Make two copies of each of the sorting card pages and cut out the cards. Or make one copy of the "regular" planets and match to the "personality" planet. Mix them up and place them face down on a table. Taking turns, each player should turn over two cards so that everyone can see.
